BY THE NUMBERS

Winter Wildlands Alliance, grassroots groups, backcountry partners, ambassadors and individual members working together to Keep Winter Wild.

**OVER 1,000 HOURS** working with Outdoor Alliance and other partners on policy issues affecting public lands and recreation

**MOBILIZED OVER 1,500** individual comments on Forest Service plans, national and state-level legislation, and regulatory documents

**OVER 40 HOURS** spent meeting with local elected officials

**OVER 1,500 HOURS** spent meeting with congressional members and staff to discuss issues affecting public lands and winter recreation

**Hosted 85 participants at the 8th Biennial Grassroots Advocacy Conference**

**WORKED WITH GRASSROOTS GROUPS ON 8 NATIONAL FOREST LAND MANAGEMENT PLAN REVISIONS IN 6 STATES**

**30 DIRECT ACTION ALERT EMAILS** sent informing supporters of policy maneuvers or public land management actions impacting winter recreation and how to get involved

**439 LETTERS** sent to Members of Congress and state elected officials from WWA supporters

**12 MONTHLY policy updates to grassroots member groups on issues impacting winter recreation**

**32 BLOG POSTS** focused on policy, advocacy and citizen science

**PARTicipated in 6 STakeholder Collaboratives or Working Groups**
CITIZEN SCIENCE COMES TO SNOWSCHOOL

A new partnership with NASA is one way we’re bolstering the SnowSchool curriculum. The goal continues to be getting kids excited for winter.

By Kerry McClay, National Snowschool Director

Can you predict how much water is in the snowpack? This winter, students enrolled in SnowSchool will be able to.

Every winter, SnowSchool introduces thousands of kids to the wonders of winter and snowshoeing. Our curriculum is being taught at 70 sites nationwide, and many of the students come from underserved Title 1 schools that have diverse populations. Winter is a great environment for kids to connect with nature. It encourages play: we build snow caves, dig snow pits, and go belly sliding. Now, some of our students will have even more opportunities to turn play into science.

After their field trip into the snow, students will be asked to predict how much snow their local mountains will receive during the coming winter. They’ll have decades of historical snowpack data collected from snow scientists at the US Forest Service Rocky Mountain Research Station and NRCS SNOTEL sites. Teachers will help them calculate averages and analyze recent precipitation trends, so they can make informed predictions about the maximum snowpack depth and the maximum snow-water equivalency. This is the same approach that hydrologists make when they’re developing water forecasts based on the snowpack. The students, though, get a prize for the closest predictions.

This winter, we’re launching a new partnership with the National Aeronautics and Space Administration’s SnowEx program. SnowSchool students will collect snowpack measurements and send their findings to NASA scientists who are testing out new LiDAR, microwave, and infrared technology, mounted on aircraft, that are designed to scan the mountain snowpack. The hope is to one day develop the technology so that scientists can detect the water content of snow in a mountain watershed in real time from a satellite. Our students’ data will help scientists test the accuracy of these new sensors.

Educators play a huge role at SnowSchool, so we’re also actively working to provide additional training to classroom teachers and outdoor science educators so they’ll be equipped to make the most of these new opportunities. At the National Flagship SnowSchool site at Bogus Basin Mountain Recreation Area, program coordinator Dirk Anderson is working to create a new Environmental Education credential program with Boise State University that features an internship at SnowSchool. And of course, we’re always working with educators across the snowbelt to launch new sites and bring these experiences to underserved kids who need it most.

All of this is made possible because of people and organizations like you, who have continued to support Winter Wildlands Alliance SnowSchool through the years. Thank you! Now, find a SnowSchool student and ask them how to predict the snow-water equivalent in the snowpack.
A growing national education program of Winter Wildlands Alliance, SnowSchool is a bridge connecting kids to the world of snow science and winter recreation. Our curriculums are designed for kindergarten to high school and combine a field trip to the snow with classroom presentations. Students learn about hydrology, winter ecology, wildlife, and snow crystals. They also make a vital connection between the snowpack—the largest reservoir in the West—and the water they drink every day.

SNOWSCHOOL + NASA

Starting this year, we’ve added a citizen science element to connect students with scientists at NASA who are developing technologies to measure the snowpack remotely. On-the-ground data recorded by the students will be used to compare the results of remote sensors deployed by NASA’s SnowEx program.

Every fall, a hand-picked selection of ski movies has created a platform for communities of snow enthusiasts to gather and celebrate their shared passion. By Melinda Quick, Festival and Membership Manager

Fifteen years ago, Winter Wildlands Alliance staff, volunteers, and community members pushed play on a small DVD player at our first official ski movie night. Meanwhile, I was a 13-year-old who was just learning how to turn my rented alpine skis down the hills of Bogus Basin, the local mountain in my hometown of Boise. The always-breaking-down-school-bus carried my peers and I to that mountain every Wednesday in the winter. I learned that sharing experiences in the outdoors with folks you like (and some you may not know) was the first step in discovering my passion.

Winter Wildlands’ “ski movie night” has evolved into the Backcountry Film Festival. This year, the Backcountry Film Festival toured across the country with 108 stops in 22 states and four countries. Together, we raised just over $190,000 dollars to support local grassroots efforts that promote environmental conservation and human-powered recreation.

I attended my first Backcountry Film Festival premiere in Boise, ID three years ago. I was still floating around the world; slowly figuring out what I wanted to do. Sitting down in the theater at the Backcountry Film Festival validated my two loves for bringing people together over films and tromping around in the snow in my snowshoes or working my way down a ski hill. I felt right.

Our goal is to share the diversity of experiences in the winter. While one person may be skiing a steep line down a rocky mountain, another may be hiking out in the snowy woods with their dog. However people experience winter, we choose a range of films with the goal to represent everyone, from all walks of life and backgrounds.

When the movies flicker on the big screen, the theater gets quiet and people revel at the adventures other people embark. As the manager of film festival, I hope these films remind us of the place where we all feel right: outside. We’re still just as happy to press the play button this season and for many more to come. In the future, we hope to fund our own films and support filmmakers who are telling stories with an emphasis on diversity. We want to expand our youth programming. But most of all, we want to continue growing the festival, to serve each and every community who enjoys a good ski movie night. Thank you to everyone who believed in the original ski movie night back in 2005, and to everyone who has joined us at a tour stop of the Backcountry Film Festival since. Let’s press play on the dream to Keep Winter Wild!
The Backcountry Film Festival is produced each year by Winter Wildlands Alliance as a celebration of the human-powered winter experience, a gathering place for the backcountry snowsports community, and a direct benefit for local grassroots programs nationwide. backcountryfilmfestival.org

YEAR 2020 BY THE NUMBERS

Celebrating the Winter Human-powered Experience

The Backcountry Film Festival is produced each year by Winter Wildlands Alliance as a celebration of the human-powered winter experience, a gathering place for the backcountry snowsports community, and a direct benefit for local grassroots programs nationwide.

In collaboration with the Colorado Outdoor Recreation Industry Office and 5Point Film Festival, Winter Wildlands Alliance hosted the second annual Backcountry Film Festival NIGHT OF STOKE at the Outdoor Retailer SnowShow. With a sold-out crowd, attendees were ignited with stoke for our outdoor community, inspired to get outside, and informed on how to advocate for their favorite wild landscapes.

Funds raised from the Backcountry Film Festival help support SnowSchool sites, fund mountain safety workshops, gather volunteers for stewardship projects, raise public awareness for local trail development, and drive advocacy efforts for the protection of wild places and public lands.

Met with Forest Service decision makers at the national, regional, and local level to advocate for sustainable recreation components in forest planning and timely and thoughtful implementation of the Over-Snow Vehicle Rule.

Met with members of Congress and their staff in DC and in their home districts to talk with them about legislation of importance to the human-powered recreation community, such as Recreation Not Red Tape and the Land and Water Conservation Fund Permanent Funding Act.

Partnered with other human-powered recreation organizations through the Outdoor Alliance to leverage our influence in recreation management and planning at the national level.

Worked on a broad range of sustainable recreation issues at the state level through Outdoor Alliance Montana and Colorado, and co-founded (with OA, American Whitewater, Access Fund, Surfrider and IMBA) Outdoor Alliance California.

Worked with partners in California to increase human-powered community engagement and provide constructive comments on winter travel plans for national forests in the Sierra Nevada.

Intervened to defend protections for wolverines and mountain goats in litigation brought by the Idaho State Snowmobile Association concerning the Sawtooth National Forest’s Fairfield Winter Travel Plan.

Successfully advocated for 59,929 acres of the Inyo National Forest to be protected as Recommended Wilderness in its new forest plan, supported robust sustainable recreation language, improved Wild & Scenic inventory, language for allowing for maintenance of fixed climbing anchors in Wilderness, and secured a commitment from the Forest Supervisor to start winter travel planning on the forest in 2020.

Pushed back against state-by-state efforts to dismantle the Roadless Rule, specifically in Utah and Alaska, and Forest Service efforts to undermine the National Environmental Policy Act.

Worked with Montana Backcountry Alliance and Crosscut Mountain Sports Center to secure new access through private land for backcountry skiers in Montana’s Bridger Mountains.

Represented backcountry skiers and human-powered recreation interests in multiple collaborative stakeholder groups.

Helped to organize a massive Public Lands Rally in Montana’s Capitol building.

Organized and convened our 8th annual Grassroots Advocacy Conference, in Boise ID, with a focus on expanding equity on public lands.

WWA thanks our supporters, volunteers and board members for their commitment and dedication to our work promoting and protecting the human-powered winter experience. WWA is grateful to all of our members and supporters at every level. We are proud and grateful to list here all of the individuals, foundations and partners who contributed $100 or more during fiscal year 2019, without whose generosity our work would not be possible.
